

ETOS GateKeeper

AI Enables. Evidence Governs. Humans Decide.

ETOS GateKeeper is an evidence-bound decision intelligence platform for high-impact enterprise decisions. It tests the evidence, governance, authority and dependencies behind a proposed decision, returns a single authoritative governed decision state, and preserves an auditable record. AI generates insight; evidence governs the outcome; a named human retains the decision.

What GateKeeper does

Evidence Validation. Each supporting source is tested for existence, relevance, currency and whether it says what the assertion claims it says.

Governance Assessment. Applicable policy and control requirements are identified and tested inside the decision path.

Authority Verification. Mandate, delegation and separation of duties are verified independently of the evidence.

Dependency & Exception Control. Open dependencies, waivers and accepted exceptions are carried into the decision state.

Human Assurance. Where human judgement is required, GateKeeper generates an interactive human review document.

Decision Traceability. The route from question to decision state is recorded and can be re-examined later.

Delivery and integration

GateKeeper is delivered as a governed web application with an authenticated organisation portal, an organisation evidence register, and a controlled Agent Assurance API for autonomous and enterprise AI agents. Agents registered to an organisation draw on a single shared assurance capacity pool; every call returns machine-readable JSON including the authoritative decision state and remaining capacity. Access is granted to approved organisations only — ETOS does not sell favourable decisions.

Assurance Credits

1 ETOS Assurance Credit = 1 completed ETOS GateKeeper governed assurance output returned to an authorised requesting user or agent. Failed or blocked non-billable executions do not consume an Assurance Credit.

Package	Price	Included assurance credits	Intended use
Developer	Free	25	Integration, development and non-production testing
Agent Starter	GBP 495	500 / month	Initial agent deployment and controlled evaluation
Agent Growth	GBP 1,995	2,500 / month	Growing agent workloads and production evaluation

Agent Scale	GBP 4,995	10,000 / month	Higher-volume production agent assurance
Enterprise Agent Assurance	Contact ETOS	Assessed requirements	Multi-agent, multi-workflow, regulated or strategic deployments

Assurance Credits are monthly allowances and do not roll over. Additional Assurance Credits may be purchased at any time. There is no automatic overage billing; additional capacity requires explicit customer action.

Enterprise pilot programmes

Pilot	Price	Included assurance credits
Starter Pilot	GBP 15,000	10,000 / month
Growth Pilot	GBP 35,000	25,000 / month
Scale Pilot	GBP 75,000	50,000 / month

Pilot usage is subject to agreed agent, organisation, concurrency and operational limits.

Governance and trust

Organisation accounts are approved before activation. Tenant association is established server-side and cannot be altered from any form. Evidence submissions, executions and credit movements are recorded with server-generated identifiers, timestamps and integrity references. Decision states are rendered only from the authoritative decision-state result, never inferred from response text.
